
PBX in a Flash+Google Voice+SIPGate drops call in 40 sec

Posted by VOIP kid - 2010/05/20 16:15

I've followed the detail instruction in
<http://www.eternj.net/tag/ata/>

And it works with the latest PIAF 1.6.

However, the outbound call was dropped about 40 seconds after the receiving party party picked up the phone.
Inbound calls works perfectly.

Where should I look to solve this problem?

Check out this forum:

<http://pbxinaflash.com/forum/showthread.php?t=5159&highlight=sipgate&page=5>

With the latest install-gv-new script,
you need to tweak the
extensions_custom.conf file for PIAF 1.6:

```
exten => _X.,1,Wait(1)
exten => _X.,n,Set(ACCTNAME=whatever)
exten => _X.,n,Set(ACCTPASS=whatever)
exten => _X.,n,Set(RINGBACK=whatever)
exten => _X.,n,Set(CALLPARK=75)
exten => _X.,n,Playback(pls-wait-connect-call)
exten => _X.,n,System(gvoice -e ${ACCTNAME} -p ${ACCTPASS} call ${EXTEN} ${RINGBACK})
exten => _X.,n,Set(GROUP())=gvout
exten => _X.,n,Set(PARKINGEXTEN=${CALLPARK})
**delete** exten => _X.,n,Park()
exten => _X.,n,ParkAndAnnounce(pbx-transfer:PAKED|45|Console/dsp)
```

```
exten => s,1,Wait(4)
exten => s,n,NoOp(**CALLERID: ${CALLERID(all)})
**delete** exten => s,2,Set(GVNUM=whatever)
```

```
exten => s,3,Set(CALLPARK=75)
exten => s,n,GotoIf($?parked:notparked)
exten => s,n(parked),ParkedCall(${CALLPARK})
exten => s,n(notparked),Goto(from-trunk,gv-incoming,1)
```

```
**delete** exten => s,4,NoOp(**CALLERID: ${CALLERID(number)})
exten => s,5,GotoIf($?6:7)
exten => s,6,ParkedCall(${CALLPARK})
exten => s,7,Goto(from-trunk,gv-incoming,1)
```

Answer the first call from Google Voice to connect to the dialed number for outbound call.

Hope this helps.
