
How to configure the FCK Editor in Sugar?

Posted by greenwave - 2009/02/23 19:24

It takes a long time to load the Compose Email page for DSL connection. Actually my client does not need so many buttons in the WYSIWYG Editor.

How do I configure the options for the HTML editor?

SugarOS 4.5.1
and
SugarCE 5.2.0

Thanks.

For SugarOS 4.5.1, edit the include/FCKEditor_Sugar/myfckconfig.js file to select buttons for the "Default" FCKEditor.

For SugarCE5.2.0, modify the include/SugarTinyMCE.php file for customization.

Please let us know your findings.
