## How to use UUID in Talend for ETL / Data Migration?

Posted by greenwave - 2009/10/22 10:03

---

We're migrating data from an old schema to a new schema which needs new entity id generated for each link in the MySQL database.

I've heard of use of UUID() in MySQL.

Is it possible to use the function call to MySQL inside the Talend OpenStudio?

Talend has a very good posting on their forum:  
How to use UUID keys with MySQL in Talend

Here's how you use the globalMap in the tMap component in Talend OS 3.2:
